The Squaring and Routing Station incorporates a manual X-Y router bridge with the Panels Plus Squaring Station. This model is designed to hold wall panels square while sheathing is tacked in place and rough openings are routed out.

The router bridge turns a 2-person job into a 1-person operation. The manual X-Y router bridge features two hand cranks. The bridge is equipped with a pendant to drive the bridge into position and has an auto-return feature to return the bridge to its home position with the push of a button. The manual X-Y router bridge is available in 120v or 230v 3ph.

The Panels Plus panelized wall panel systems are more ergonomic than traditional construction methods and are developed at an ergonomic working height. This eliminates the need to continually kneel or hunch over to build wall panels – improving employee health and safety.

**Squaring Table with Stationary
& Telescoping Sides**

120v or 230v Router
